

Table: List of products tested for presence of PFAS

We tested 93 textile products, mainly from major retailers, including apparel, bedding, and furnishings. Products were purchased in 2020. All products were tested for total fluorine (total F) – an indicator of the presence of PFAS chemicals. Of these, 61 products were analyzed for 36 target PFAS analytes, including all 54 products with total F ≥ 10 ppm and 7 products without detectable total F. Of the 61 products, 30 were tested for additional PFAS (perfluoroalkyl acid precursors) using the Total Oxidizable Precursor assay.

Product ID numbers correspond to Table S1 in the paper, where more information is provided about specific PFAS compounds detected, green language on product labels, and country of origin.
